

# Risolvo le disequazioni separatamente.

$$\textcircled{1} \frac{-4x^2 - 3x + 1}{(x^2 + 9)(x^2 - x + 6)} \geq 0$$

Studio il segno della frazione:

$$\textcircled{a} -4x^2 - 3x + 1 \geq 0$$

$$\Delta = 9 + 16 = 25 > 0$$

$$x = \frac{3 \pm 5}{-8} \begin{cases} x_1 = -1 \\ x_2 = \frac{+1}{4} \end{cases}$$

$$\boxed{-1 \leq x \leq \frac{1}{4}}$$

$$\textcircled{b} x^2 + 9 > 0 \quad \forall x \in \mathbb{R}$$

$$\textcircled{c} x^2 - x + 6 > 0 \quad \Delta = 1 - 24 < 0 \\ \forall x \in \mathbb{R}$$

La soluzione della diseq fraz è

~~...~~

$$\boxed{-1 \leq x \leq \frac{1}{4}}$$

$$\textcircled{2} 3x \geq x^2 \rightarrow x^2 - 3x \leq 0 \quad \text{...}$$

$$\rightarrow \boxed{0 \leq x \leq 3}$$

$$\textcircled{3} \quad \frac{3}{x^2-3x} + \frac{2}{x} \leq \frac{1}{x^2}$$

$$\frac{3x + 2x(x-3) \leq (x-3)}{x^2(x-3)}$$

$$\frac{3x + 2x^2 - 6x - x + 3}{x^2(x-3)} \leq 0$$

$$\frac{2x^2 - 4x + 3}{x^2(x-3)} \leq 0$$

Studio il segno della frazione:

$$\textcircled{\bullet} \quad 2x^2 - 4x + 3 \geq 0$$

$$\Delta = 16 - 24 < 0 \quad \forall x \in \mathbb{R}$$

$$\textcircled{\bullet} \quad x^2 > 0 \quad \forall x \in \mathbb{R} \quad \text{ma } x \neq 0$$

$$\textcircled{\bullet} \quad x - 3 > 0 \quad x > 3$$

La soluzione è:

$$\boxed{x < 3 \cup \{x \neq 0\}}$$

Metto a sistema le soluzioni:

$$\begin{cases} -1 \leq x \leq \frac{1}{4} \\ 0 \leq x \leq 3 \\ x < 3 \cup \{x \neq 0\} \end{cases}$$

La soluzione è:  $0 \leq x \leq \frac{1}{4}$
